SCHOOL BASED ASSESSMENT

MATHEMATICS

(For Regular learners, learners with Physical Impairment and Hearing Impairment)

Learner's Name: _____

Assessment No. _____

Date: _____

Instructions to the learner

1. This paper consists of **20** questions.
2. Answer **all** the questions.
3. Show all the working in the spaces provided below each question.

FOR TEACHER'S USE ONLY

Question Number	1	2	3	4	5	6	7	8	9	10
Maximum score	2	2	3	2	3	3	3	2	2	2
Learner's score										

Question Number	11	12	13	14	15	16	17	18	19	20
Maximum score	2	3	3	3	1	2	2	3	4	3
Learner's score										

This paper consists of 8 printed pages.

Mathematics
School Based Assessment -2026
Grade 7

Answer ALL the questions in the spaces provided.

1. A non-governmental organization donated 382 459 000 shillings to the ministry of health for public hospitals renovations.
 - (a) Write the amount of money donated in words. (1 mark)
 - (b) Determine the total value of digit 4 in the figure above. (1 mark)
2. During a school sports day, medals were packed in 6 boxes each containing 8 medals. The winners were to be awarded the medals at the end of the competition. During awarding session, 10 medals were found broken. Determine the total number of medals that were presented to the winners. (2 marks)
3. A farmer harvested 48 mangoes and 60 oranges. He packed them into identical baskets such that each basket had the same number of mangoes and same number of oranges, with no fruit left over. Determine:
 - a) The highest number of baskets obtained. (2 marks)
 - b) The number of mangoes in each basket (1 mark)

4. Omogeni is a juice vendor in a local market. He packs the juice in plastic containers each holding $\frac{1}{4}$ litres of juice. On a certain day, he sold 24 litres of juice. Determine the number of plastic containers of juice he sold on that day. (2 marks)
5. A tailor bought 34.8 meters of fabric for designing costumes for drama festival. Each costume requires 2.32 meters of fabric. Calculate the total number of costumes the tailor made from the fabric. (3 marks)
6. Tobias' sitting room is square in shape. He covered the floor completely with a carpet whose area was 40.96m^2 . determine the length of one side of the floor using division method. (2 marks)

7. During a PE lesson, learners ran round the football pitch once. The length of the pitch is $(3x + 2)$ meters and the width is $(2x + 4)$ meters. Write a simplified algebraic expression for the total distance covered by the learners. (3 marks)
8. A father is 18 years older than his son. The sum of their present age is 46 years. Determine the present age of the son (2 marks)
9. A school plans to take x learners for a field trip. For safety and supervision reasons, the number of learners going on the trip must be at least 20 but not more than 45. Write two simple inequality statements to represent this information (2 marks)

10. Korir constructed a ramp leading to his granary store to make it easier to transport bags of grain into storage after harvest. The ramp reaches a height of **4 m** above ground and has a length of **10 m**, as shown in the diagram below

Calculate the value of x

(2 marks)

11. Peter designed a page marker for making birthday party hats in the shape as shown below.

Determine the perimeter of the page maker.

(2 marks)

12. A school's vegetable garden is as shown in the diagram below

Calculate the area of the garden.

(3 marks)

13. A community water tank is cylindrical in shape. The tank has a diameter of 7 m and a height of 10 m. The tank is $\frac{3}{4}$ full of water. Determine the quantity of water in the tank in litres. (3 marks)
14. The odometer reading of Kariuki's car was 90 176 km before the start of a journey. At the end of the journey, the reading was 90 296 km. Kariuki took 1 hour 30 minutes to complete the journey. Determine the speed of his car in km/h during the journey. (3 marks)

15. Mary put a cup of tea in an oven to increase the temperature. After some time, the temperature of the tea was recorded as 336 Kelvin. Convert this temperature into degrees Celsius. (1 mark)
16. Mwende bought a bag of beans at Ksh. 9 000 from a farmer for selling. She later sold the bag of beans making a 20% profit. Calculate the selling price of the bag of beans. (2 marks)
17. A sales agent in a certain company earned a commission of Ksh. 8,000 after selling goods worth Ksh. 40,000. Determine the commission as a percentage of the total sales. (2 marks)
18. A carpenter designed the top of a table in a triangular shape as shown below

Determine the difference between the largest and the smallest angles in the figure above. (3 marks)

19. During a geometrical construction lesson, the teacher instructed the learners to use a ruler and a pair of compasses only to construct triangle ABC. The triangle was such that $AB = 8 \text{ cm}$, $\angle ABC = 45^\circ$ and $\angle CAB = 30^\circ$. Determine the length of line BC. (4 marks)

20. During a school health and wellness programme, 14 learners measured their masses to the nearest kilogram. The masses recorded were: 30, 40, 35, 50, 40, 40, 45, 35, 40, 40, 50, 45, 35, 40. Represent this data in a frequency distribution table. (3 marks)
